An Odd Nugget of Gold. There have been many large and ddly shaped gold nuggets found in the United States and elsewhere, but covered at the Midhas mine, on Sulky

gully, near Melbourne, Australia, in 1887. The nugget was flat and almost the exact counterpart in contour of a colossal human hand held open, with he exception of the thumb and foreinger, which were closed together in a manner so as to make it appear that the thumb was holding the finger in place. Its greatest length was 121/2 inches and its greatest breadth 8

It was of the very purest gold, with but a little of foreign substances adering, mostly between the "fingers," and weighed 617 ounces. It was found pounds of pure gold.
